Hazardous Weather

Day 1 Weather Hazards
Valid: 0800 Mon - 0800 Tue

Isolated areas
of heavy rain
and flash
flooding
possible over
NM, especially
over burn scar
locations

*Threat levels are based on FEMA Region 6 criteria. State or local threat level criteria may differ.

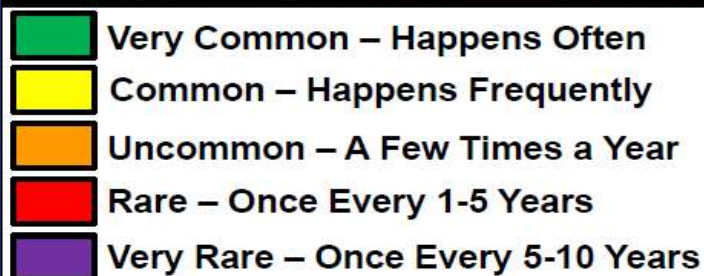

Hazardous Weather

Day 2-3 Weather Hazards

Valid: 0800 Tue - 0800 Thu

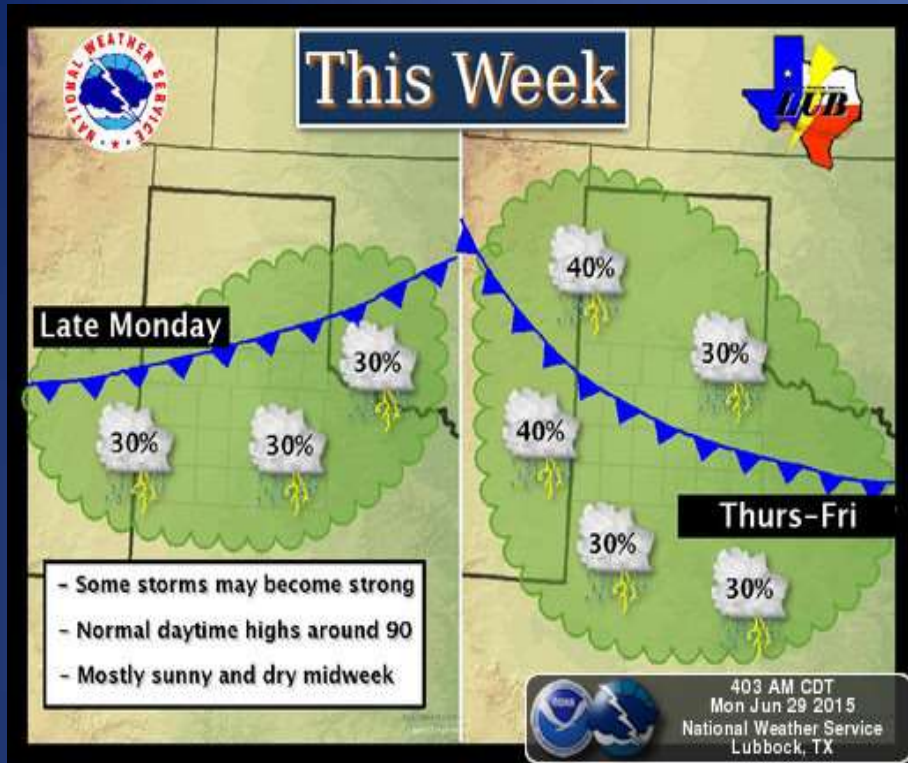

Isolated areas of heavy rain and flash flooding possible over NM on Wednesday, especially over burn scar locations

A few strong to severe storms possible each day

*Threat levels are based on FEMA Region 6 criteria. State or local threat level criteria may differ.

Hazardous Weather

Chances of showers and thunderstorms bookend what will be an otherwise pleasant week overall. Temperatures are expected to be near normal, or even slightly cooler than normal by late week. You may notice that there are chances for rain on Independence Day, so keep an eye on that if you have outdoor plans.

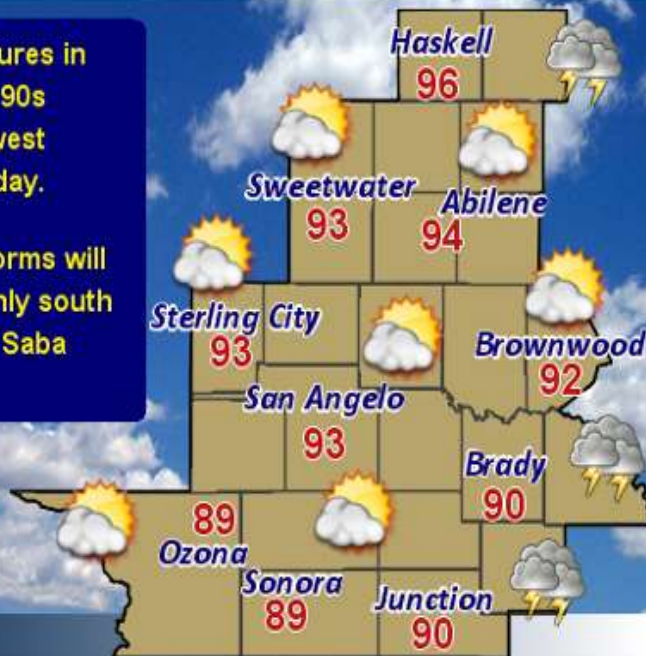

Temperatures will be seasonably warm today, though storm chances will increase this evening, especially across southeast New Mexico and the Permian Basin. Severe weather is not currently anticipated, but stronger storms may be capable of producing gusty wind and localized heavy rainfall. Storms that develop are expected to gradually weaken as they move south overnight.

Hazardous Weather

Warm Start to the Week

Expect temperatures in the lower to mid 90s across most of west central Texas today.

A few thunderstorms will be possible, mainly south of a Sonora-San Saba line.

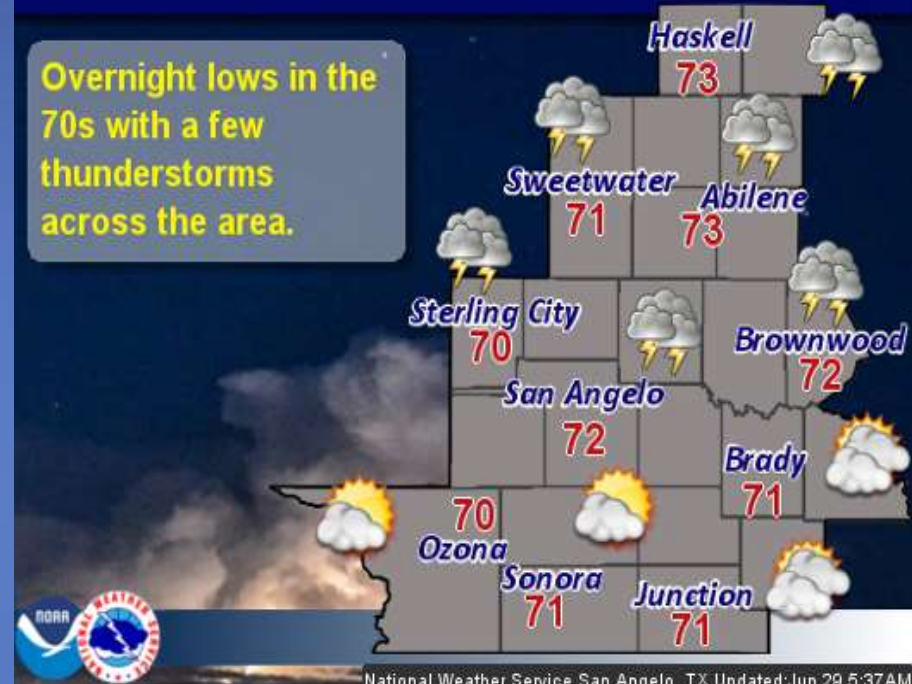

National Weather Service San Angelo, TX Updated: Jun 29 5:37 AM

Near-normal temperatures are expected today across West Central Texas, with afternoon highs generally in the low to mid 90s. A few thunderstorms will be possible during the afternoon hours, mainly south of a Sonora to San Saba line. Severe weather is not anticipated.

A Few Storms Possible Tonight

Overnight lows in the 70s with a few thunderstorms across the area.

National Weather Service San Angelo, TX Updated: Jun 29 5:37 AM

Hazardous Weather

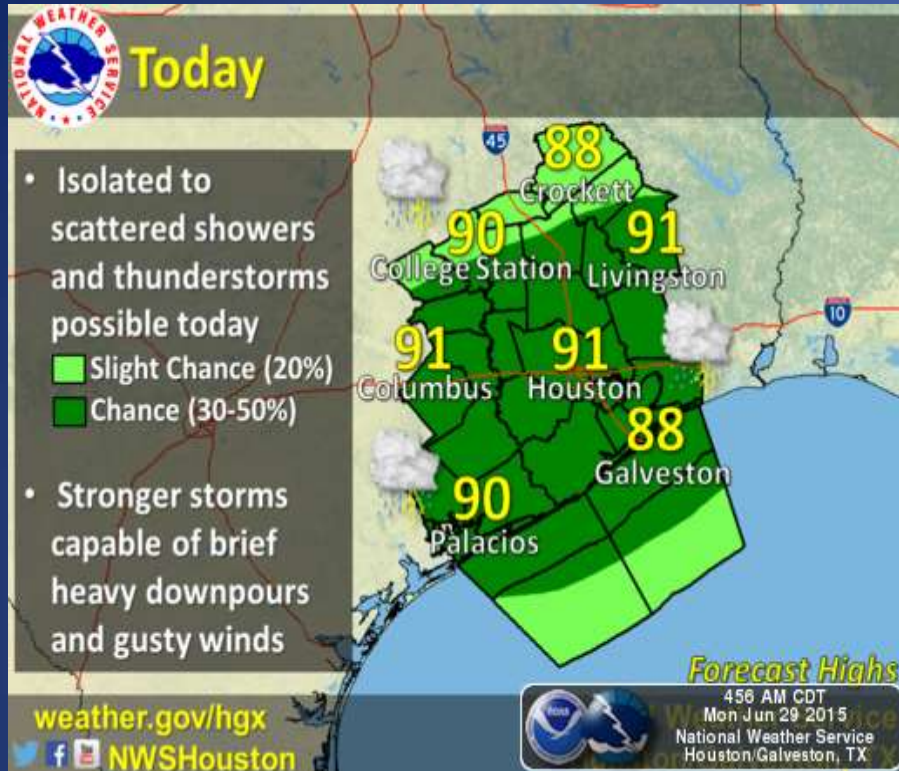

Isolated to scattered showers and thunderstorms are expected today across northern areas and eastern areas. Locally heavy rains are the main threat and may cause minor flooding. Temperatures will be 2 to 4 degrees below late June averages with highs in the upper 80s to lower 90s.

A mix of sun and clouds today with only an isolated shower expected. Afternoon highs will be in the low 90s across the east and mid to upper 90s across the Brush Country.

Hazardous Weather

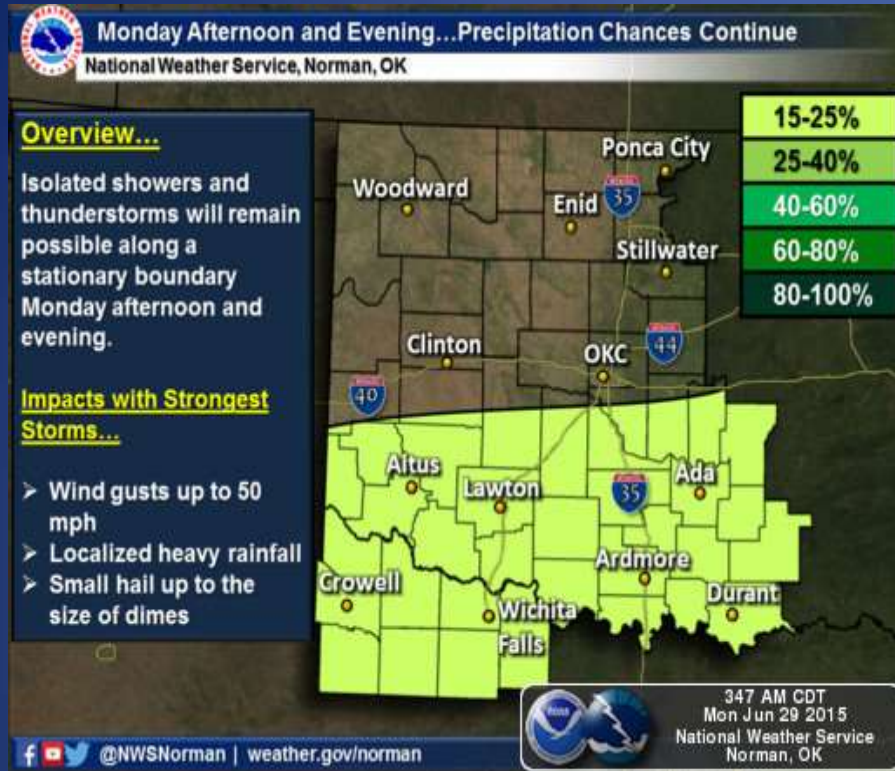

Isolated to scattered showers and thunderstorms are possible across the region today, mainly from late morning into the early evening hours.

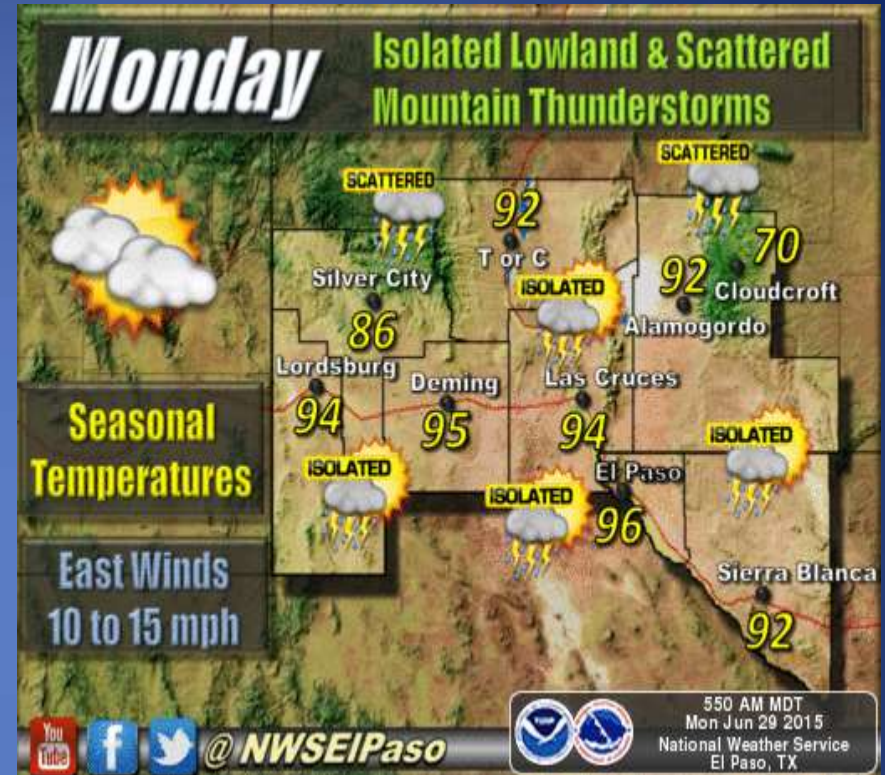

Widely scattered showers and thunderstorms will be possible through the overnight and early morning hours. A few of these storms could produce hail up to the size of pennies and wind gusts near 50 mph.

Hazardous Weather

A weak frontal boundary will linger across southern OK and western north TX this afternoon and evening, remaining a focus for shower and thunderstorm development. A few of these storms may become strong, with a threat of small hail and wind gusts up to 50 mph.

High pressure persisting over the Great Basin will keep the Borderland under a north flow aloft, while at the surface, east winds will keep moisture and instability around. The result will be scattered thunderstorms over the mountains and isolated thunderstorms over the lowlands. Temperatures will remain at seasonal levels.

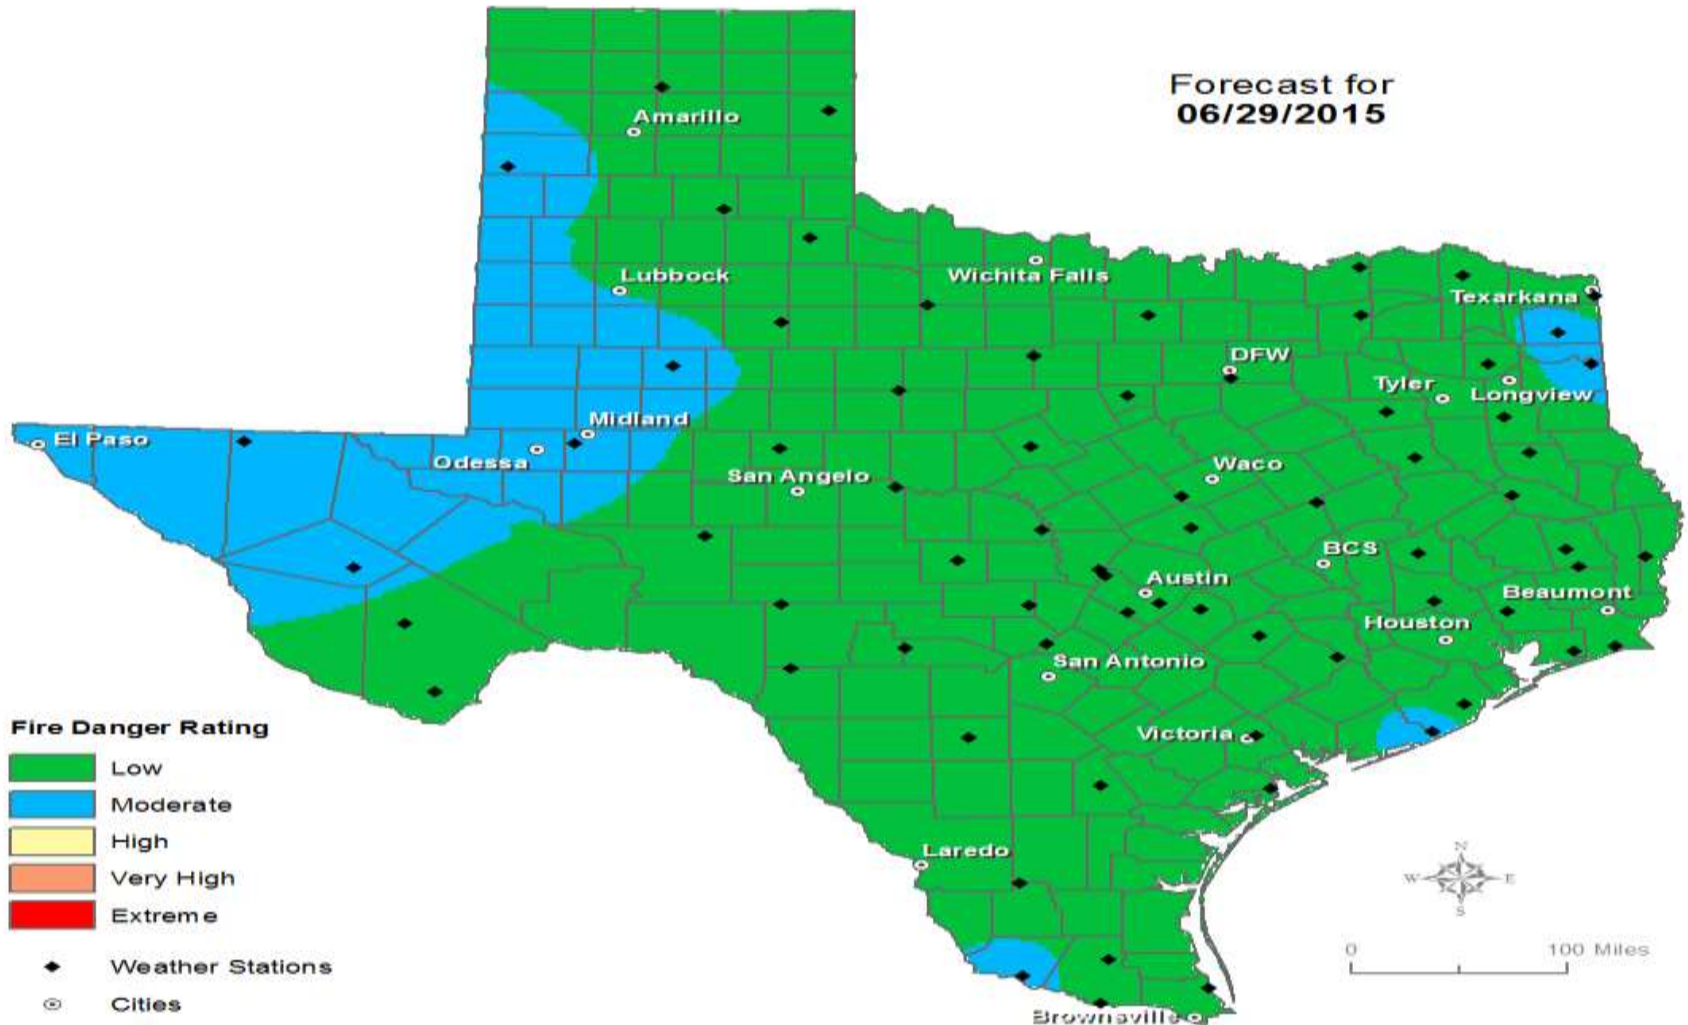

Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
06/28/15	Flood Advisory	Blanco, Burnet, Caldwell, Comal, Gillespie, Guadalupe, Hays, Kendall, Kerr, Llano, Travis and Williamson Counties
